**MOLECULAR BIOLOGY**

**SARS- CoV-2 (COVID 19) Detection by Real Time PCR\***

SARS- CoV-2 (COVID 19) Detection by Real Time PCR **NEGATIVE**

ORF1ab GENE Ct Value **NEGATIVE**

**Genx Diagnostics ICMR registration no. GXDND**

**Test Principle:** Real time RT-PCR

**Specimen Type:** Nasopharyngeal / Oropharyngeal Swab

**Interpretation:**

Positive: Indicates the presence of SARS-CoV-2 (COVID 19) in the given specimen

Negative: Indicates the absence of SARS-CoV-2 (COVID 19) in the given specimen

A **“Positive”** result is indicative of infection with SARS-CoV-2 (COVID 19) but does not rule out bacterial infection or co-infection with other viruses. The agent positive may not be the definite cause of disease.

A **“Negative”** result does not rule out infection. A careful consideration to combination of epidemiological factors, clinical history, examination, other relevant investigation findings and treatment history should be done.

**Test Limitations:**

- A Positive result does not distinguish between a viable/ replicating organism and a non-viable organism.
- False Negative results may be seen in samples collected too early or too late in the clinical course of the illness. Kindly refer to the latest ICMR guidelines.
- Presence of PCR inhibitors in the sample may prevent DNA amplification. Paradoxical results may arise due selection of inappropriate specimens and contamination during specimen collection.
- Sensitivity of this test depends upon the quality of the sample submitted for testing and stage of the infection.

**Note:** This test performance is validated at Genx Diagnostics.
